

PROJECT REPORT

Sales Performance Analysis Report

A written summary of the Sales Performance Analysis Power BI dashboard — covering headline KPIs, the key insights the data reveals, and recommendations for improving results.

Prepared by Pranay • Data Analytics Project

SECTION 1

Key Performance Indicators

These figures summarise overall performance across every customer segment, country, and product in the dashboard. They form the baseline against which the insights on the following pages are measured.

Across **700 orders**, the business generated **\$118.73M** in total sales and **\$16.89M** in profit, giving an overall profit margin of **14.23%**. In total, **1 million units** were sold. Together, these numbers show a business that is profitable overall — though, as the next section shows, performance varies significantly by customer segment.

SECTION 2

Key Insights

Five patterns stand out from the dashboard data — spanning product performance, customer segments, and discounting behaviour.

1

Paseo, VTT, and Velo Are the Top-Selling Products Everywhere

These three products are the best sellers in every country covered by the dashboard, not just on average. The same ranking holds consistently, which points to steady, broad-based demand rather than a result driven by any single market.

2

Government and Small Business Are the Most Profitable Segments

The Government segment generated the highest sales of all customer segments, at \$52.5M, with a profit margin of 21.69%. The Small Business segment followed with \$42.43M in sales and a 9.77% profit margin. Both segments combine solid sales volume with healthy profitability.

Government: \$52.5M sales · 21.69% margin | **Small Business:** \$42.43M sales · 9.77% margin

3

The Enterprise Segment Is Operating at a Loss

The Enterprise segment recorded \$19.61M in sales but a loss of \$614.55K, resulting in a loss margin of -3.13%. Looking at this year by year, the loss margin improved from -4.78% in 2013 (on \$4.05M in sales) to -2.70% in 2014 (on \$15.56M in sales) — a meaningful improvement, though the segment is still unprofitable overall.

Overall: \$19.61M sales · -3.13% margin | **2013:** -4.78% | **2014:** -2.70%

4

Channel Partners Deliver the Highest Profit Margin

The Channel Partners segment generated total sales of \$1.8M with a total profit of \$1.32M — a profit margin of 73.13%, the highest of any segment by a wide margin. This is driven by a low manufacturing cost relative to the sale price for products sold through this segment, meaning most of each sale converts directly into profit.

Channel Partners: \$1.8M sales • \$1.32M profit • 73.13% margin

5

Products Sold Without a Discount Contribute the Least Revenue

Across the discount-band breakdown, products sold at "None" (no discount) consistently made the smallest contribution to total sales, trailing well behind the Low, Medium, and High discount bands. This suggests that discounting plays a meaningful role in converting demand into actual sales, rather than simply reducing margin on sales that would have happened anyway.

In Summary

The business is profitable overall, led by strong performance in the Government, Small Business, and Channel Partners segments. The main drag on profitability is the Enterprise segment, which is improving but still operating at a loss. Product demand is concentrated in a few top sellers, and discounting appears to be an effective driver of sales volume.

SECTION 3

Suggestions

Based on the insights above, the following actions are recommended to improve sales and profitability going forward.

- 1 Promote Montana and Carretera.** Use ad campaigns or targeted discounts to boost sales of these two products, which consistently trail behind the top sellers.
- 2 Reduce costs in the Enterprise segment.** Lowering manufacturing and other costs would help turn this segment profitable — an important goal, since it accounts for a large share of total sales.
- 3 Increase marketing investment in Channel Partners.** Since this segment already earns the highest profit margin, growing its sales volume through heavier marketing would be a highly efficient way to add profit.
- 4 Maintain at least a low discount on products.** Since products sold without any discount add the least value to total revenue, avoiding a "no discount" pricing approach may help protect overall sales.
